A. Mission Description and Budget Item Justification

Software is a key to meeting the Department of Defense's (DoD) increasing demand for high-quality, affordable, and timely national defense systems. With growing global parity in software engineering, the DoD must maintain leadership to avoid strategic surprise. To assist the DoD in retaining a long-term differential advantage over potential adversaries, the Software Engineering Institute (SEI) Applied Research program element (PE) develops and evaluates the feasibility and practicality of software and computer science concepts, with the potential to improve future DoD systems. The research conducted by this PE directly benefits the technical domains such as Command, Control, Communications, Computers, and Intelligence (C4I), Autonomy, Cyber, and Engineered Resilient Systems.

B. Program Change Summary (\$ in Millions)	FY 2017	FY 2018	FY 2019 Base	FY 2019 OCO	FY 2019 Total
Previous President's Budget	8.420	8.955	9.365	-	9.365
Current President's Budget	8.105	8.955	9.300	-	9.300
Total Adjustments	-0.315	0.000	-0.065	-	-0.065
 Congressional General Reductions 	-	-			
 Congressional Directed Reductions 	-	-			
 Congressional Rescissions 	-	-			
 Congressional Adds 	-	-			
 Congressional Directed Transfers 	-	-			
Reprogrammings	-	-			
SBIR/STTR Transfer	-0.305	-			
FFRDC Transfer	-0.009	-	-	-	-
 Other Program Adjustments 	-0.001	-	-0.003	-	-0.003
Economic Assumption	-	-	-0.062	-	-0.062

Change Summary Explanation

FY 2019 adjustments are reflective of higher priority DoD requirements.

A. Mission Description and Budget Item Justification

B. Accomplishments/Planned Programs (\$ in Millions)

Work conducted under this PE will enable resilient mission assurance in heterogeneous and contested environments through the verification and validation of system performance and architecture. The program will also assist the DoD in retaining a long-term advantage in the areas of software-intensive systems and cybersecurity by enhancing assurance, exploiting automation, and understanding human-computer interaction.

The SEI Applied Research PE has two main research thrusts with known military applications: 1) Software Engineering, Systems Verification and Validation, and Mission Assurance (formerly Mission Assurance) and 2) Information Assurance.

Title: SEI Applied Research in the Area of Software Engineering, Systems Verification and Validation, and Mission Assurance (formerly Mission Assurance) Description: This thrust seeks to develop verification techniques for requirements identification, systems of systems architectures, and virtual integration of components. Additionally, research in this area will enable requirements verification for software assurance, analysis and control of unverified code, and automated repair of damaged code. Software production and code analysis methods developed through this program will also improve the accuracy of behavior prediction of complex software system in untested environments. Increasingly numerous lines of code will require a commensurate increase in sophistication of verification and validation mechanisms. FY 2018 Plans: In FY 2018 there will be two main lines of effort: create verification and validation research solutions focused on time-sensitivity and reliability for safety-critical systems; and create containment technology that will enable software systems to continue to function under duress. FY 2019 Plans: In FY 2019 plans will include developing formal methods for explaining decision patterns in planning and learning systems, thus maximizing human-machine teaming effectiveness, developing and building benchmarks and datasets, using emerging machine learning computing technologies for evaluating and enhancing decision making systems, and developing techniques to assess risks and greatly increase the pervasiveness and adaptability of programmability in devices and Information Technology systems. FY 2018 to FY 2019 Increase/Decrease Statement:

Remarks

The SEI Applied Research PE represents a pivot toward more fundamental research that enables the DoD to address longer-term challenges in software technology and engineering. The SEI Applied Research PE bolsters the organic research at the SEI Federally Funded Research and Development Center (FFRDC), enables stronger collaborations between the SEI FFRDC and academia, attracts top researchers to the SEI, and gives the DoD access to top experts in information science, which generally enhances the DoD's ability to benefit from the military applications of research in software and computer science.

E. Performance Metrics

Performance metrics for this project include the transition of solutions, methods, and practices for use in DoD technology development programs and programs of
record; the transition of solutions, methods, and practices to the Defense Industrial Base to support DoD technology development programs and programs of record, the
number of citations in peer reviewed journals and reports, and the number of external research collaborations and interactions with the broader software and computer
science community.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2017	FY 2018	FY 2019
Title: Cyber Security	-	-	1.000
Description: Warfighting in the cyber domain often operates at sub-second timescales and across multiple domains of authority. Methods used to accomplish many tasks (e.g., malware analysis, coordinating multiple agents) demand large amounts of time, attention, and special skills and are not scalable. This thrust seeks to develop and increase the use of automation to simplify the completion of these tasks. Example activities include automation of moving target defenses, code artifact reverse engineering, analysis of network flows at enterprise scale, and development and assessment of workforce skills.			
FY 2019 Plans: This program will create tools and methods to automatically identify, mitigate, and repair unique vulnerabilities (including those from malware or deliberate nefarious interference) in software-enabled DoD systems (including emerging systems reliant on machine learning).			
FY 2018 to FY 2019 Increase/Decrease Statement: There is no notable change in the Cyber investment between FY 2018 and FY 2019. Note the Cyber effort was funded in Project P781 in FY 2018.
